

GET THE PULSAR ADVANTAGE

Switch to a better future with Pulsar's Certified Solar & Oil Boiler Installer Training Courses

The importance of training cannot be over emphasised. Training is not a luxury, it's a necessity that can greatly benefit an individual and add considerable value to a business. The importance of good training programmes and the relevant training courses cannot be underestimated. Training your staff is vitally important as poorly trained staff create problems such as call backs and customer complaints which means time is wasted and customer satisfaction lost. At Pulsar we have a dedicated training centre offering candidate's real time training, using fully operational equipment. Our tutor's help people succeed with getting the qualifications and even provide bespoke training modules to bring candidates onto the next level. At Pulsar we believe we must make it as easy as possible for installers and contractors to keep up to speed with changing legislation, improve skill levels and encourage best practice in the industry.

Pulsar currently run two sets of accredited training courses. The three day courses are fully accredited by both FETAC and OFTEC respectively and upon successful completion attendees will gain a certificate of competency as well as a solid understanding of the Solar and boiler market, the technology and the product options available. Make sure you don't get left behind – attend our training course now and become an accredited installer.

Register with OFTEC and reap the benefits

DID YOU KNOW...

- According to most oil boiler manufacturers, failure to have their product installed/commissioned by an OFTEC registered installer will render the boiler warranty invalid.
- Home Energy Saving Scheme (HES) Grants will only be paid on installations that have been carried out by approved registered installers.
- According to current building regulations any oil storage tank installed within 10 meters of a water point or drain must be of bund (tank-in-tank) type.

These are just some of the things you will learn if you attend one of our OFTEC Approved Oil Boiler Training Courses (OFT101 & OFT105E).

The Oil Firing Technical Association (OFTEC) represents companies in Ireland and the United Kingdom that utilise oil fired appliances within the heating and cooking industry. OFTEC has established a range of skill focused courses that will facilitate OFTEC registration.

These specifically designed OFTEC courses enable participants to develop skills such as commissioning, servicing and boiler installation. Successful completion of these courses will enable OFTEC registration to be availed of and this registration is universally recognised as sign

of high quality workmanship. The respect for OFTEC services is illustrated by Sustainable Energy Ireland's (SEI) acceptance of OFTEC registration as a requirement for the new home energy grant scheme.

OFTEC offer a comprehensive hands-on oil boiler maintenance course which will combine both practical and theory work covering:

- Servicing oil boilers
- installation
- commission
- fault finding exercises

FETAC Accredited Training –

Pulsar direct are advising installers to familiarise themselves with the technology and products available and to obtain an accredited qualification to ensure they capitalise on the growing renewable energy sector. Following the launch of our new Renewables Training Showroom, Pulsar are running a series of three-day FETAC accredited Solar training courses. In conjunction with a market leading renewable energy training provider, our aim is to help you to up-skill and prepare for the boom in the renewable energy sector. Ken O'Shea, Technical Sales Manager commented, "Solar energy systems are now an important part of the heating and plumbing market and in order to move into this area installers and plumbers need to be properly trained".

In order to become registered it is vital that you have completed one of these accredited training courses as government funding will only be made available for an installation that has been -carried out by a SEI registered installer. The speed of which are courses get booked up reflects how dedicated both companies and individuals are to raising their professional standards.

To attend the any of our training courses installers can contact our Technical Team on 1850 318 318 with preferential introductory prices being offered by Pulsar for existing and new customers.

Book your training today and grab your share of this lucrative market!

Non-Accredited Training

Apart from accredited theoretical and practical training it is important that an installer becomes familiar with the actual product he will be using. Pulsar Direct have been running “product specific” training courses for the past four years. This training is designed to help customers solve the everyday problems they will experience on site before they happen.

As well as the all important installation expertise, training also ensures that installers are in the best possible position to advise their customers on the most suitable heating and hot water solutions for their homes, as well as educating people about the alternatives available. We also provide thorough fault finding tips to ensure installers know what to look for should any problem arise. This ensures that the customer will always receive the most efficient

service possible on a call out. Training therefore is imperative for any professional planning to branch out in his area. Besides the training that you will receive, the day will also incorporate a tour of the company so that you can get a feel for how our operation works. You will get to meet our dedicated telesales and technical departments and take a tour of our new warehouse facilities. Here you will see how the logistics of our company work from our goods inwards department to our packaging and distribution stations.

The standard cost of this training day is normally €100 but Pulsar are offering this to our customers and any attendees they wish to bring Free of Charge!

Experience you can trust.
